

CropBioLife is a plant foliar spray that greatly increases nutrient uptake.

CropBioLife is a 100% natural, flavonoid-based foliar spray, crafted from bitter-orange extract.

By enhancing nutrient uptake, plants unlock their full potential, supporting everything from boosted metabolism to stronger root exudates and higher yields—results of optimised nutrition.

BioGro #5351

Healthiest Corn Crop in This Field—Ever!

Grower, New York USA

This New York state corn crop was challenged. CropBioLife helped restore it to health.

A healthier corn/maize crop can achieve:

- Higher yields & quality
- Stronger pest & disease resistance
- Enhanced root exudation & soil health
- Better drought tolerance & UV protection
- Optimised photosynthesis & resilience

Documented Experiences

The table shows customer **results after using CropBioLife for one season**, with improvements in key corn parameters at harvest.

*Experiences may vary. Data is based on independent lab testing and post-harvest observations.

Parameter	Increase
Average Yield	Up to 12.9%
Crude Protein	Up to 15.08%
Soluble Protein	Up to 8.4%
Vitamin C	Up to 15.7%

Spray Application

The following table shows the spray rates and timing that we recommend based on 10 years of trial work.

Crop	Dose per Hectare	Spray/s per Season	Application 1	Application 2
Corn / Maize	1.4 ounces per acre	Option A: 1 spray	V4–V6	—
	*For Stress Mitigation: Double the standard rate per acre.	Option B: 2 sprays	V4–V6	When tassel emerges (VT)
